

The logo for ipns, consisting of the lowercase letters 'ipns' in white on a blue square background.

MANUFACTURING

Our client needed to relocate it's existing site entrance and security lodge to the opposite side of the site and to provide controlled access for both heavy and light goods vehicles, pedestrians, staff and visitors and required the relocation of existing card access readers, video intercoms and CCTV cameras.

IPNS installed automated bi-fold gates across each of two vehicle entrances, along with rising barriers and a semi-automated pedestrian gate and the perimeter was then secured with v-mesh security fencing to complete the installation.

Along with electronic controls, located within the security lodge, a new fibre optic link cable was installed to provide remote operation of the gates and video intercom communication off site. This allowed access to the site 24 hours a day via either intercom, card access or ANPR CCTV.
