

The logo for ipns, consisting of the lowercase letters 'ipns' in white on a blue square background.

APARTMENT BLOCK

Our client was redeveloping a seven storey office block in to luxury apartments in the heart of Birmingham city centre. They wanted a video intercom system that was robust and also stylish.

IPNS installed a CAME BPT XIP system with a vandal resistant entrance panel and hands free monitors that were mounted on the wall of each apartment.

On this occasion, the installation was fairly straightforward in terms of cabling and configuration because the building was unoccupied but the flexibility of the CAME BPT XIP is ideally suited to apartment blocks with existing residents. Because the system is software driven, the handsets can be pre-configured before being installed and the whole system runs over a 2 wire bus cabling configuration, which makes it easy to adapt to older buildings where it is difficult to install new cables.
